

Simon WOOLF

Young [programmer | maths geek | physics geek] doing high-quality freelance full-stack web development. Experienced mostly with Ruby-based stacks (sinatra & rails), but very happy to work with any technology that'd be fun to learn! Email me at simon@simonwoolf.net to talk about anything :)

An up-to-date version of this CV is available at <https://github.com/SimonWoolf/CV>

SELECTION OF PROJECTS AND FREELANCE WORK

DISABILITY UPDATE

Website and case archive for Monika Sobiecki and Spencer Keen's Disability Discrimination Update, done on contract. Source publicly available by their kind permission. [Source](#)

SUDOKU

Sudoku webapp. Just for fun (done at Makers). Neat recursive solver/generator, guaranteed to generate puzzles with a unique solution. [Source](#)

WEBSANDBOX

'Html-&-css made fun' app. Everyone has their sandbox. Click an element for a pop-up that lets you edit its HTML and CSS. Fully versioned & revertable. Done at Makers. [Source](#)

MARKOV TEXT GENERATION

Markov generation with an interactive twist - coming soon!

DATA ANALYTICS WITH DC.JS

Client-side data processing with crossfilter and dc.js, for DirtJockey. (Private client work, no source)

TERMINAL-PAINT

Basic terminal pixel painting program, done as a test at Makers to create a product from spec. [Source](#)

LANGUAGES & SKILLS

RUBY—Multiple projects, including webapps in Rails and Sinatra. My current favourite language

PYTHON—Various computational mathematics scripts and electromagnetic field lines visualisation project, as part of my degree

UNIX—Used Linux in various forms since uni, mostly debian-based distros. Poor to middling bash scripter—I tend to go to ruby or python for any more than trivial scripts

MISCELLANEOUS WEBDEV—javascript (& jQuery), HTML / CSS. Tend to like using preprocessors for most of those (coffeescript, haml, sass/scss, and the like) for big rails projects

MATHS & PHYSICS—In addition to my degree, have tutored A-level maths and physics in my spare time for a few years now

MISCELLANEOUS—LaTeX. Vimmer (vimist? vimian?), but haven't yet got up the courage to properly learn vimscript. Dabbled in Java to make an Android app I wanted, but wasn't a big fan

Of course, very happy to learn new things not in this list :)

EDUCATION

- 2006-2010 **BA MSci in MATHEMATICS AND PHYSICS, Cambridge University**
Took the three year Mathematics BA (in first year, also took the Physics part of the NatSci tripos), followed by the fourth year of the NatSci Physics MSci.
- 2011-2013 **LAW LLB, Queen Mary, University of London**
Sidetrack into a Law conversion course. Got excellent results (and was a quarter-finalist in the ESU national moot), but luckily realised that I wanted to be a programmer rather than a lawyer before going too far down that road.
- 2013-2014 **Makers Academy**
Intensive twelve-week programming & web development course. Teaches programming best practices (TDD, software design, version control, agile), using ruby with sinatra, rails, HTML and CSS, javascript & jQuery, etc. Took it to get a firm grounding of programming & webdev essentials, and get rid of all the bad habits I'd built up doing scientific programming...
- SCHOOL A levels (Double Maths, Physics, English Lit.): AAAB respectively
STEP Mathematics: 1,1
AEA Physics: Merit
GCSEs: 7 A*s, 3 As
